# What's new with qubits? A European view

Workshop organised and moderated by

*Dr. Eng. Guillaume Colin de Verdière, International Expert in HPC, CEA*

*Dr. Eng. Jean-Philippe Nominé, Fellow, HPC Strategic Collaborations Manager, CEA*

After several workshops on/with **quantum computing** at **TERATEC Forums**, over the last years, organised or co-organised by CEA, we come back to technology progress...

- ▶ 2021 Europe is on its way towards “Hybrid Computing”
- ▶ 2020 Quantum computing: what's new in QuBits?
- ▶ 2019 Quantum computing : which applications will benefit ?
- ▶ 2018 Quantum revolution is here
- ▶ 2016 Specialised computing architectures : helpers or challengers ?

## What's new with qubits? A European view

- ▶ After last year workshop focusing on use cases, we come back this year on technological progress on the path to qubits, specifically emphasizing European developments.
- ▶ The workshop will take the perspective of the French National Quantum Strategy, which intends to leverage some of these technologies.
- ▶ After an overview of the French HQI approach (Hybrid HPC-Quantum Initiative), we will review several available or emerging European qubit technologies.

<b>10mn</b>	<b>Introduction</b> <i>Guillaume Colin de Verdière, Jean-Philippe Nominé, CEA</i>
<b>20 mn</b>	<b>Quantum Computing with neutral atoms</b> <i>Loïc Henriët, CTO, Pasqal</i>
<b>20 mn</b>	<b>Ubiquitous Quantum Accelerators Based on NV-Centers in Diamond</b> <i>Dr. Florian Preis, Head of Quantum Software and Applications, Quantum Brilliance</i>
<b>20 mn</b>	<b>Building scalable and ultra-coherent quantum computers with carbon nanotubes</b> <i>Matthieu Desjardins, founder, C12</i>
<b>20 mn</b>	<b>Quantum computing for simulation applications</b> <i>Max Hettrich, research engineer , Alpine Quantum Technologies</i>
<b>20 mn</b>	<b>A lean roadmap towards a fault-tolerant universal quantum computer</b> <i>Blaise Vignon, Chief Product Officer, Alice&amp;Bob</i>
<b>20 mn</b>	<b>Co-designing quantum accelerators</b> <i>Bruno Taketani, IQM Quantum Computers</i>
<b>20 mn</b>	<b>Modular optical quantum computing</b> <i>Niccolo Somaschi, cofounder, Quandela</i>

DE LA RECHERCHE À L'INDUSTRIE

# CEA Standpoint

➤ **A 5 year programme based on a national hybrid HPC/Quantum platform**

**Part of French Quantum Strategy (announced Jan. 2021)**

**National funding's 72,3 M€, leveraged by European, industrial and regional funding**

**Seed for a European hybrid quantum infrastructure**

➤ **Objectives**

Integrate (HW/SW) quantum technologies in an HPC centre (CEA/TGCC)

Build the **pilot** of a future HPC/Quantum solution

Assess QC **technologies**

Develop QC **hybrid software stack (libraries/middleware)**

Promote, disseminate and support usage (**applications**)

➤ **Programme organization & funding**

QPU acquisitions (36,3 M€ (FR) + co-funding by Europe)

Industrial & academic R&D (25,5 M€ + co-funding by industrials)

QC ecosystem and User community support (10,5 M€ (FR) co-funded by Europe, industrials and French regions)

► EuroHPC project 2022-2025

► 1 pasqal machine @TGCC, 1 @ JSC/JUNIQ

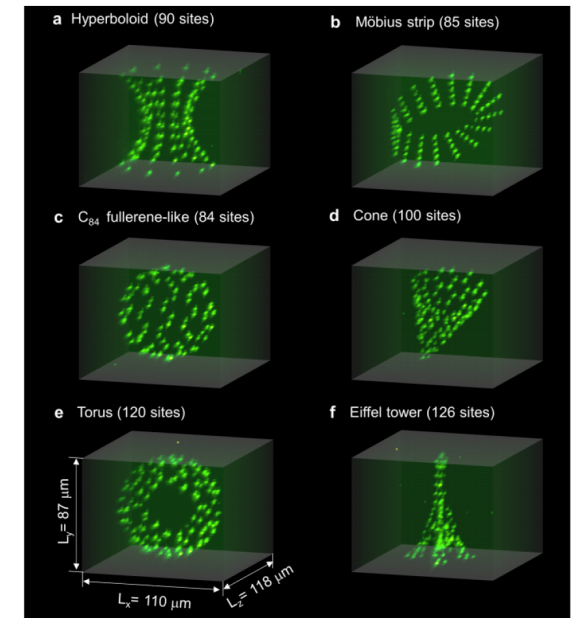

- Quantum Simulator (analog)
- Neutral Rydberg atoms handled by laser (optical tweezers)
- 2 \* 100+ qubits in production

► <https://pasqal.io>

- 200 qubits in the lab in 2021...  
[Exploring the entanglement frontier with programmable arrays of atomic qubits – PASQAL](#)
